

Environmental Charter

R4

OCee Design's unique R4 Environmental Charter sets an industry-leading standard for sustainability and underpins our commitment to Reduce, Reuse, Refurbish and Recycle.

Although our business is unlikely to ever seriously harm the environment, we believe firmly in responsible manufacturing, sustainability and recycling.

We have implemented a robust environmental management system and are accredited to ISO 14001. As such, processes designed to protect the environment have been embedded into our working practices and we continually plan, monitor and review our performance to minimise the impact of our operations.

At OCee Design we aim:

- to Reduce the environmental impact of all our business activities
- to Reduce the frequency of chair purchases by maximising product longevity and issuing a full 5 year warranty on all our seating solutions
- to Reuse seating products that have not reached their end of life and can be of benefit to Schools, Charities and Social enterprise organisations
- to Refurbish part worn chairs that would otherwise be discarded and potentially end up in landfill
- to Recycle the maximum amount of waste material generated within our business process
- to Recycle end of life seating products that would otherwise end up in landfill
